NOBEL PRIZE IN CHEMISTRY AWARDED FOR RESEARCH INTO HOW DNA REPAIRS ITSELF

TOMAS LINDAHL, PAUL MODRICH, AZIZ SANCAR

PARIS - LONDON - NEW YORK, 10.10.2015, 17:38 Time

USPA NEWS - The Nobel Prize in Chemistry 2015 is awarded to Tomas Lindahl, Paul Modrich and Aziz Sancar for having mapped, at a molecular level, how cells repair damaged DNA and safeguard the genetic information...

The Nobel Prize in Chemistry 2015 is awarded to Tomas Lindahl, Paul Modrich and Aziz Sancar for having mapped, at a molecular level, how cells repair damaged DNA and safeguard the genetic information. Their work has provided fundamental knowledge of how a living cell functions and is, for instance, used for the development of new cancer treatments.

The reason our genetic material does not disintegrate into complete chemical chaos is that a host of molecular systems continuously monitor and repair DNA. The Nobel Prize in Chemistry 2015 awards three pioneering scientists who have mapped how several of these repair systems function at a detailed molecular level.

AZIZ SANCAR has mapped nucleotide excision repair, the mechanism that cells use to repair UV damage to DNA. People born with defects in this repair system will develop skin cancer if they are exposed to sunlight. The cell also utilises nucleotide excision repair to correct defects caused by mutagenic substances, among other things.

PAUL MODRICH has demonstrated how the cell corrects errors that occur when DNA is replicated during cell division. This mechanism, mismatch repair, reduces the error frequency during DNA replication by about a thousandfold. Congenital defects in mismatch repair are known, for example, to cause a hereditary variant of colon cancer.

In the early 1970s, scientists believed that DNA was an extremely stable molecule, but TOMAS LINDAHL demonstrated that DNA decays at a rate that ought to have made the development of life on Earth impossible. This insight led him to discover a molecular machinery, base excision repair, which constantly counteracts the collapse of our DNA.

Tomas Lindahl

Francis Crick Institute and Clare Hall Laboratory, Hertfordshire, UK

Paul Modrich Howard Hughes Medical Institute and Duke University School of Medicine, Durham, NC, USA

Aziz Sancar University of North Carolina, Chapel Hill, NC, USA
